YGAME

WHITE PAPER

v1.81

Table of Contents

Introduction

We see the growth of DeFi recently. There are many Yield Farming, Staking and Liquidity Mining that have taken the space by storm, with participants earning by basically "locking" their tokens for a time. While generally great, these concepts have one downside: impermanent loss (IL), APY is decreasing. If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens.
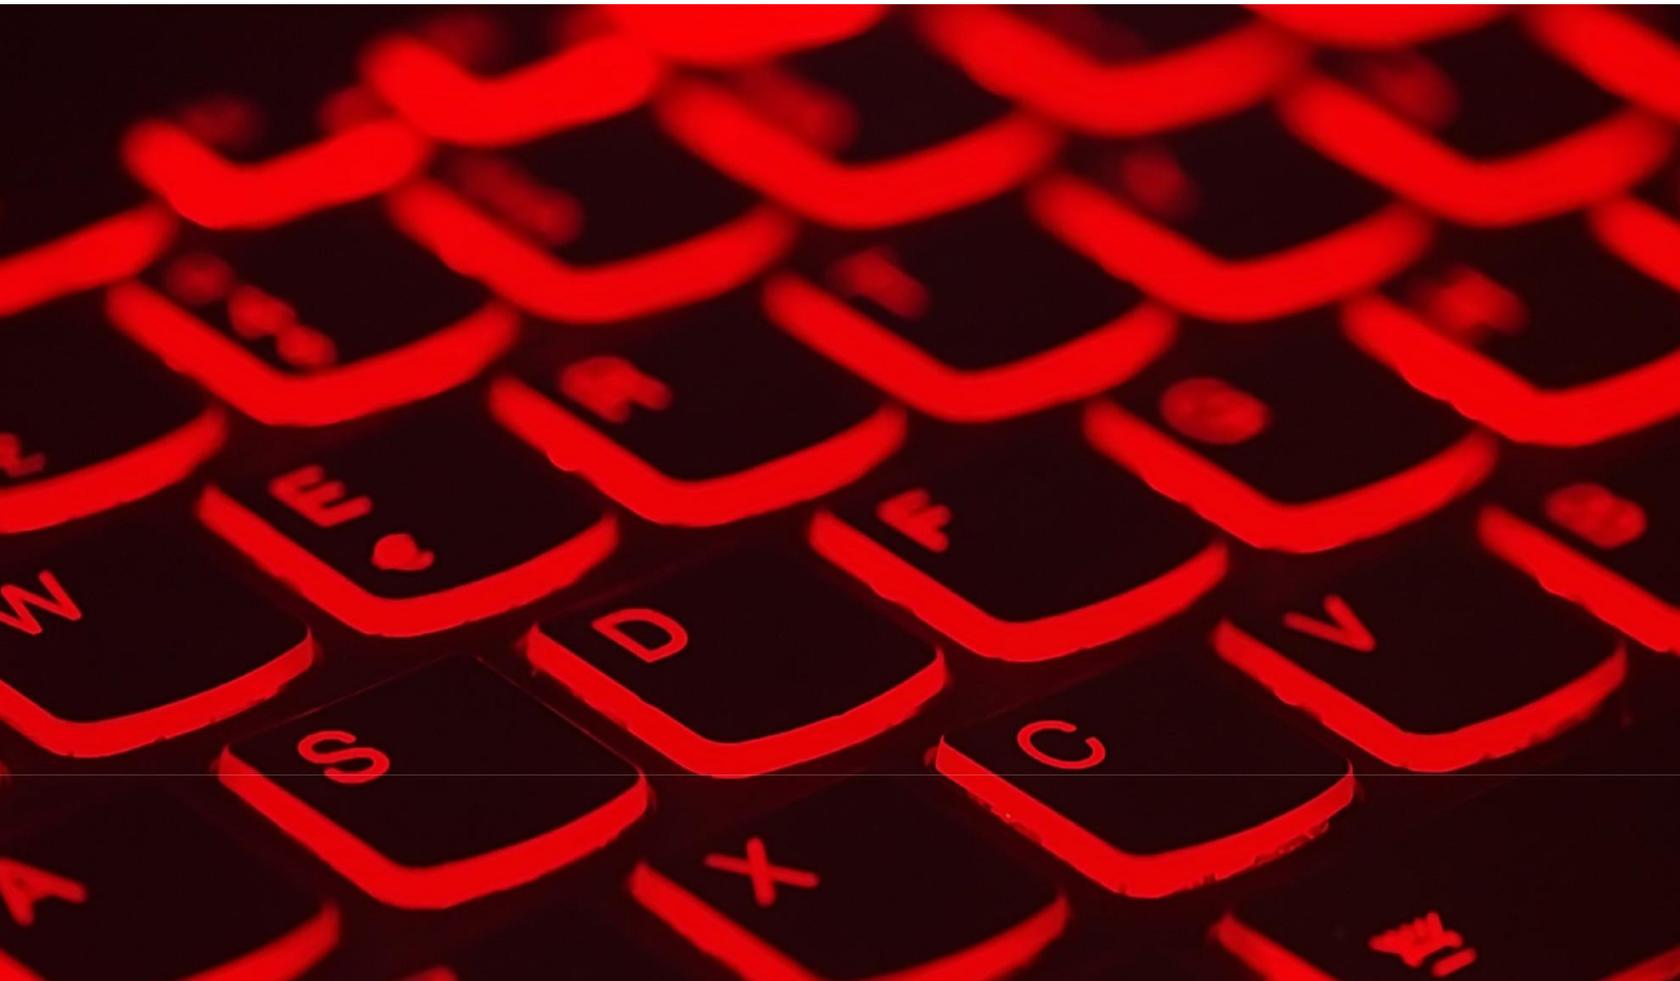

YGAME is an experimental crypto-currency issued on Binance Smart Chain using BEP-20 token standard.

<p align="center">YGAME means Yield Game</p>

The YGAME smart contract applies a 10% fee on all transactions (buy/sell). Out of this, 4% is automatically distributed to holders, without farming! This means the number of tokens in your wallet will forever increase as people transact, and in effect, you get paid for just holding YGAME. In addition, the YGAME smart contract also takes 6% of each transaction and automatically adds it to the liquidity pool. The liquidity pool will continuously increase, which leads to a higher price floor of YGAME.

This is what YGAME aims to accomplish: Simply hold it in your wallet and you will get more!

YGAME is also a utility token that will be used in our ecosystem: Lottery, Lending, Charity, NFT Marketplace, and more.

Overview

YGAME is an autonomous yield and liquidity generation protocol that aims to directly reward its holders whilst concurrently increasing liquidity. This is funded by a 4% tax taken from each transaction. Consequently, the protocol has a permanently increasing price floor, with all investors earning additional YGAME tokens just for holding.

- 40% Distributed proportionally across existing holders
- 60% Transformed into YGAME/BNB LP Tokens, and added to liquidity

With, YGAME is a new token created with the following features:

Presale (ILO – Initial Liquidity Offering) via Unicrypt

- Pre-minted tokens are transferred to presale address (80%)
- Dev only keep 1% (marketing purpose) and 2% (airdrop) of the total supply
- 16.43% of tokens are burned before presale to create a "black hole" address that get rewards from transactions to reduce amount of token gradually
- 65% of raised funds are locked for 1 year in liquidity

➢ So, the YGAME Protocol is a community driven, fair launched DeFi Token.

Anti-rug pulls

Liquidity is automatically accumulated per every token transfer. Every token transfer has a liquidity fee of 6% of the transferred token amount. The fee is added to the liquidity pool on PancakeSwap. This allows liquidity pools to increase by every transaction, thus enabling anti-rug pulls.

In addition, our smart contract prevents to set the fees more than 10%, and max transaction percent is always above 1%. So, there is no need to renounce ownership smart contract. We keep control of smart contract to work with exchanges so that we can exclude their wallets from the fee if necessary, this is also convenient to work with next products in our ecosystem.

In-wallet passive income

Every transaction has 10% of the transferred token amount. 4% of the fee is redistributed to all token holders automatically if the users hold YGAME. This means users' token balances grow gradually over time, thus earning passive income in their wallet over time.

Reflection

YGAME resides within a class of token that rewards investors just for holding, the number of rewards received increases over time the longer an investor holds for. Holders are also rewarded for the success of YGAME with higher transaction volumes leading to increased fees, and rewards for distribution. We believe this mechanism provides investors with an active stake in YGAME success!

Token burn

Before presale, 16.43% of the total supply of YGAME was sent to the "black hole" address, permanently reducing the supply. Black hole Address: **0x000000000000000000000000000000000000dEaD**

As the black hole address is classified as a YGAME holder it also receives a share of each transaction fee. Each share is burned leading to a persistently reducing circulating supply of YGAME.

Liquidity Pool

YGAME is launched with 65% presale value will be added to liquidity and lock for 1 year.

Safer and better than similar ones

Even if this is a fork from SafeMoon, but we improve it to have a better and safer smart contract. So, we do not need to renounce ownership or call to TimeLock function, so we can go further with our next products.

- Max transaction percent is always above 1%

We can prevent whale but also never limit transactions of normal users. It is dangerous if this value is set to zero or an exceedingly small number, people can hardly transfer tokens.
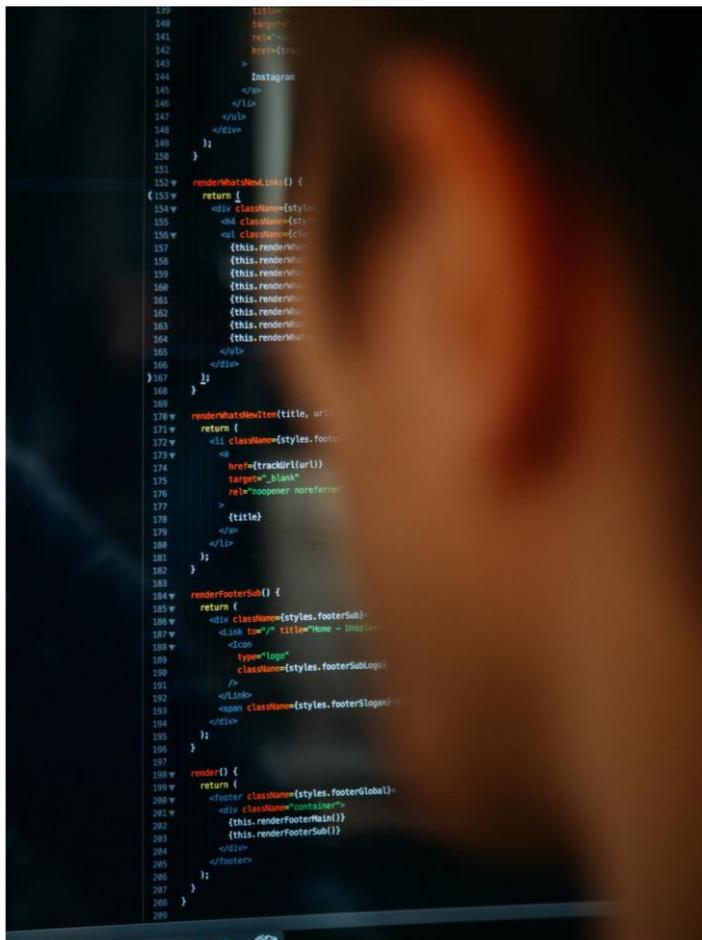

- Transaction fee is never above 10%

In some scam projects, the team can set this value to an extremely high number so they "lock" transactions of users in the rug pull.

- Make sure newly created LP tokens are locked

In similar projects, the recipient of the newly created LP tokens is the owner of the contract. The newly created LP tokens are unlocked.

Smart contract of YGAME token changes the recipient of the newly created LP tokens to the contract, make sure that the LP tokens are locked.

```
// add the liquidity
uniswapV2Router.addLiquidityETH{value: ethAmount}(
    address(this),
    tokenAmount,
    0, // slippage is unavoidable
    0, // slippage is unavoidable
    address(this), // ### change the recipient of the newly created LP tokens to the contract in order to ensure that the LP tokens are locked.
    block.timestamp
);
```

Our ecosystem

Besides holding YGAME to get rewards, YGAME is also being used as the utility token for products in our ecosystem below.

Lottery

- There are many rounds and will be launch weekly.
- In each round, the player deposits $1 (or more if he wants to have more chance of winning) value of YGAME token to participate. They can configure to make this happen weekly automatically.
- Prize pool of a round is the total amount of token people deposited in that round.
- We have an incentive mechanism for players (also holders) to get more chances to win by holding YGAME token. The more YGAME token that players hold in the round, the more chance to win.
- At the end of the round, winners are selected by a provable random number generator, the winning selector mechanism gets the deposited amount of player and number of tokens he holds in the round to determine the odds of winning.
- Small portion of the prize will be burned, and another portion will transfer to charity funds.
- More details will be published later. We cannot expose more at this time.
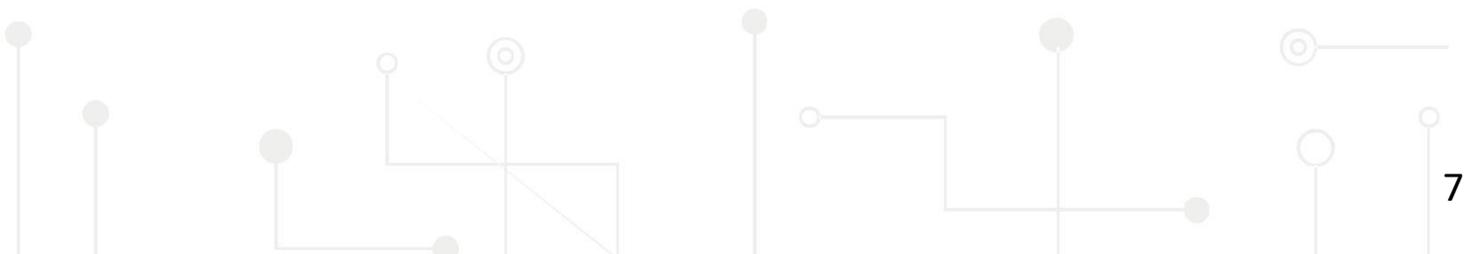

Charity projects

- As other businesses and companies, we would like to be responsible with the community by supporting unlucky people via charity projects
- A portion of profits from our products to contribute to charity platforms
- Raising funds to participate in charity

Lending

- This is a special product that will be used by lenders to earn passive income via lending or staking stable coins.
- We will negotiate and work with good partners to have the best interest (up to 30% per year)
- We could apply "auto compound" if DeFi is more mature in 2022 on Binance Smart Chain.

More projects

- In 2022: NFT Marketplace, and more.
- Basically, YGAME will be used in these products and burn to decrease supply.

Presale and Token Distribution

- Total supply: 1,000,000
- Token symbol: YGAME
- Token type: BEP-20
- Token contract address: 0x00e7c1BEDFf7Cc0815FB51A129a5893FEC604262

- Presale: 222,932.59 (22.29%)
- Presale & Lock fee: 4,118.16 (0.41%)
- Liquidity: 99,608.51 (9.96%)
- Dev (Marketing purpose): 10,000 (1%) – Lock for 3 months before presale
- Airdrop: 20,000 (2%) – Lock for 2 months before presale
- Burn: 643,340.75 (64.33%)

Roadmap

Q2 2021

- Market research
- Idea and plan
- Build and test smart contract
- Launch website
- Audit smart contract
- Launch Presale
- Dex listing on PancakeSwap (V2)
- Marketing and community boost

Q3 2021

- CoinGecko Listing
- CoinMarketCap Listing
- List on CEX: Whitebit, Bitmart,…
- Lottery app development (smart contract & website, testing on testnet, beta version)
- Airdrop

Q4 2021

- Launch Lottery app
- Plan and launch charity projects
- Plan and work with partners for next product: Lending app

Q1 2022

- Launch Lending app

Q2-Q4 2022

- More projects: NFT Marketplace...
